APPLICATION FOR AMENDMENT OF POLLUTION CONTROL PERMIT PA-2244

THIS APPLICATION is to be filed with the Director of Pollution Control, 810 Blanshard Street, Victoria, B.C. V8V 1X5.

Any person who qualifies as an objector under section 16 of the *Pollution Control Act*, R.S.B.C. 1979, may, within 30 days of the date of application, or within 30 days of the date of publication in *The British Columbia Gazette* or in a newspaper, or where service is required, within 30 days of serving a copy of the application, file with the Director at the above address an objection in writing to the granting of a permit, stating the manner in which he is affected.

Preamble—As ordered by the Director of Pollution Control, British Columbia Forest Products Ltd. installed pollution control works in their Victoria plant at a cost of over \$2.4 million to control the discharges to the air from the power boilers. These facilities (dry scrubbers) are removing most of the flyash and substantial quantities of salt, which previously discharged into the environment but have been unable to meet the Director's order, dated November 24, 1974, which required a removal of 80% of all particulate material, including sea salt, greater than 0.3 microns. Salt enters the system from seawater which has soaked into the logs while they are in the ocean.

The purpose of the application is to have discharges from the power boiler placed un-

der permit. The company can and will meet the most stringent Provincial requirements for flyash but is requesting that a realistic allowance be made for sea salt. As technology improves the company is willing to meet more stringent salt requirements.

British Columbia Forest Products Limited, Victoria Wood Products Division, hereby applies for amendments, as described below, to Pollution Control Permit PA-2244, granted on November 13th, 1974, which authorized the discharge of particulate matter from Victoria Wood Products Division, located at Victoria, B.C., to the air.

Amendments Requested:

Power boiler particulate emissions to be not more than 20% of all particulate matter including salt entering the secondary dust collection system. The collection system designed and installed by Combustion Power Corporation, Menlo Park, California, was approved in accordance with the conditions stated in the Permit PA-2244 covering letter November 13, 1974.

Permit Conditions Requested:

Power boiler emissions to be not more than 5.5 mg/mol excluding salt or 16.5 mg/mol including salt for particulate greater than 0.3 micron.

The discharge points are three dry scrubber stacks.

Rate of discharge, 50,000 SCFM each stack; duration, 24 hours a day; frequency 7 days a week. Combined rate of discharge: 150,000 SCFM.

This application, dated on 13th of April 1981, was posted on the ground in accordance with the Pollution Control Regulations.

APPLICATION FOR AMENDMENT OF POLLUTION CONTROL PERMIT PA-1479

THIS APPLICATION is to be filed with the Director of Pollution Control, Parliament Buildings, Victoria, B.C. V8V 4S5.

Any person who qualifies as an objector under section 16 of the *Pollution Control Act* may, within 30 days of the date of application, or within 30 days of the date of publication in *The British Columbia Gazette* or in a newspaper, or where service is required, within 30 days of serving a copy of the application, file with the Director at the above address an objection in writing to the granting of an amendment, stating the manner in which he is affected.

Preamble—The purpose of this application is to cover under permit the emissions from an expansion of our production facilities. All emissions will be controlled to comply with the most stringent pollution control standards presently in effect.

Texada Lime Ltd., 303, 535 Thurlow Street, Vancouver, B.C. V6E 3L2, hereby applies for amendments, as described below, to Pollution Control Permit PA-1479 granted on February 4, 1972, which authorized the discharge of contaminants from a

lime plant located at 20303—102B Avenue, Langley, B.C., to the air.

Amendments Requested:

Increase total permit emission volume from 1058 mol/sec. to 1678 mol/sec.

Incorporate the following emissions in the permit: (a) fabric dust collector, fan, stack and related appurtenances. Emission volume: 620 mol/sec. Maximum particulate loading: 5.5 mg/mol. (b) lime kiln start-up stack.

Emission volume: Indeterminate due to emergency nature of use.

This application, dated on April 30, 1981, was posted on the ground in accordance with the Pollution Control Regulations.
